Core Classes Reflection

Along with reflecting on your overall education, you need to reflect more specifically on what you have gotten out of your core classes. For each of your core classes (math, science, history, and language arts) you need to write several paragraphs in response to the questions on the following handout.

**History**

What is the most important thing you have learned in history, either this year or in previous years?

Why is it important to learn about history? How will you use your knowledge of history in your future?

What is your favorite unit, activity, or lesson that you did this year in history?

**Language Arts**

What is the most important thing you have learned in language arts, either this year or in previous years?

How will you use what you have learned in language arts in your future, both in high school/college and in your life as an adult?

What is your favorite unit, activity, or lesson that you did this year in language arts?

**Science**

Specifically, what have you learned in science that will help you in the future?

What skills have you developed throughout your time in science class and how will you utilize those skills later in life?

What was the most challenging part of science class, and why?

What did you enjoy learning the most in science, and why?
Math (Schroedl)

Where will you use math skills in your future?

How will math understanding help with your goals in life?

Not all math is the same. What aspects of math do you find the most interesting and enjoyable? Why? (examples: probability, finding unknown, figuring out the 5d questions, propositions, graphs, shapes, etc.)

How do you enjoy learning math? (groups, projects, skill and drill, Khan, etc.) Why?

What are you proud of with regard to math class? (You ALL have things to be proud of!)

Math (Stanley)

What is an area of math that you struggled with when you started middle school that you have improved upon in the past three years?

What is a specific time in math in which you encountered a situation that was difficult for you? How did you persevere and overcome this difficulty?

What are you most proud of when you consider yourself as a math student throughout middle school?
